Comment

Given the aim of the test case is to verify the appearance of the "Please wait" message upon clicking the registration button with invalid email inputs, the primary focus is on whether this specific message appears. However, the overall expected behavior also involves appropriate handling of the invalid email input.

Analysis of the Two Cases:

Case 1:

- **Action:** Invalid email input is provided, registration button is clicked.
- **Observation:** "Please wait" message appears, but no error or confirmation message appears. This refers to the bottleneck.
- **Analysis:** This indicates that while the system is showing the "Please wait" message, it is not handling the invalid email input correctly by not displaying the necessary error message. Also, it implies that we have to do retesting. During retesting with the same inputs, the message Molimo Vas Sacekajte is not properly visible.

Case 2:

- **Action:** Invalid email input is provided, registration button is clicked.
- **Observation:** "Please wait" message appears together with a confirmation message.
- **Analysis:** This indicates a critical issue as the system not only fails to handle the invalid email input correctly but also erroneously proceeds as if the registration was successful.

Test Case Verdict:

For both cases, the appearance of the "Please wait" message does meet part of the test case expectation. However, the test case cannot be considered a full pass based solely on this partial success because the proper handling of invalid inputs is essential for a valid registration process. The expected behavior includes not only the display of the "Please wait" message but also appropriate error handling.

Conclusion:

Overall Verdict: Fail
